NASHVILLE, TENNESSEE 37203

F O R E W O R D

THIS ANNUAL REPORT IS COMPILED BY THE TENNESSEE STATE AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE (ASCS) TO PROVIDE PROGRAM DATA AND STATISTICS ON THE OPERATIONS OF OUR COUNTY ASCS OFFICES DURING 1973.

THE AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE IS THE AGENCY OF THE U. S. DEPARTMENT OF AGRICULTURE THAT ADMINISTERS SPECIFIED COMMODITY AND RELATED LAND USE PROGRAMS DESIGNED FOR VOLUNTARY PRODUCTION ADJUSTMENT, RESOURCE PROTECTION, AND PRICE, MARKET, AND FARM INCOME STABILIZATION.

OUR APPRECIATION IS EXTENDED TO COUNTY AND COMMUNITY ASC COMMITTEEMEN, COUNTY OFFICE PERSONNEL, REPRESENTATIVES OF OTHER AGRICULTURAL AGENCIES, FARMERS, AND FARM ORGANIZATIONS WHO CONTRIBUTED TO THE SUCCESS OF OUR FARM PROGRAM IN 1973.

TENNESSEE STATE ASC COMMITTEE

CLAUDE E. ROBERTS, CHAIRMAN
PAUL K. ARP

DR. W. D. BISHOP, AGR. EXT. SERVICE

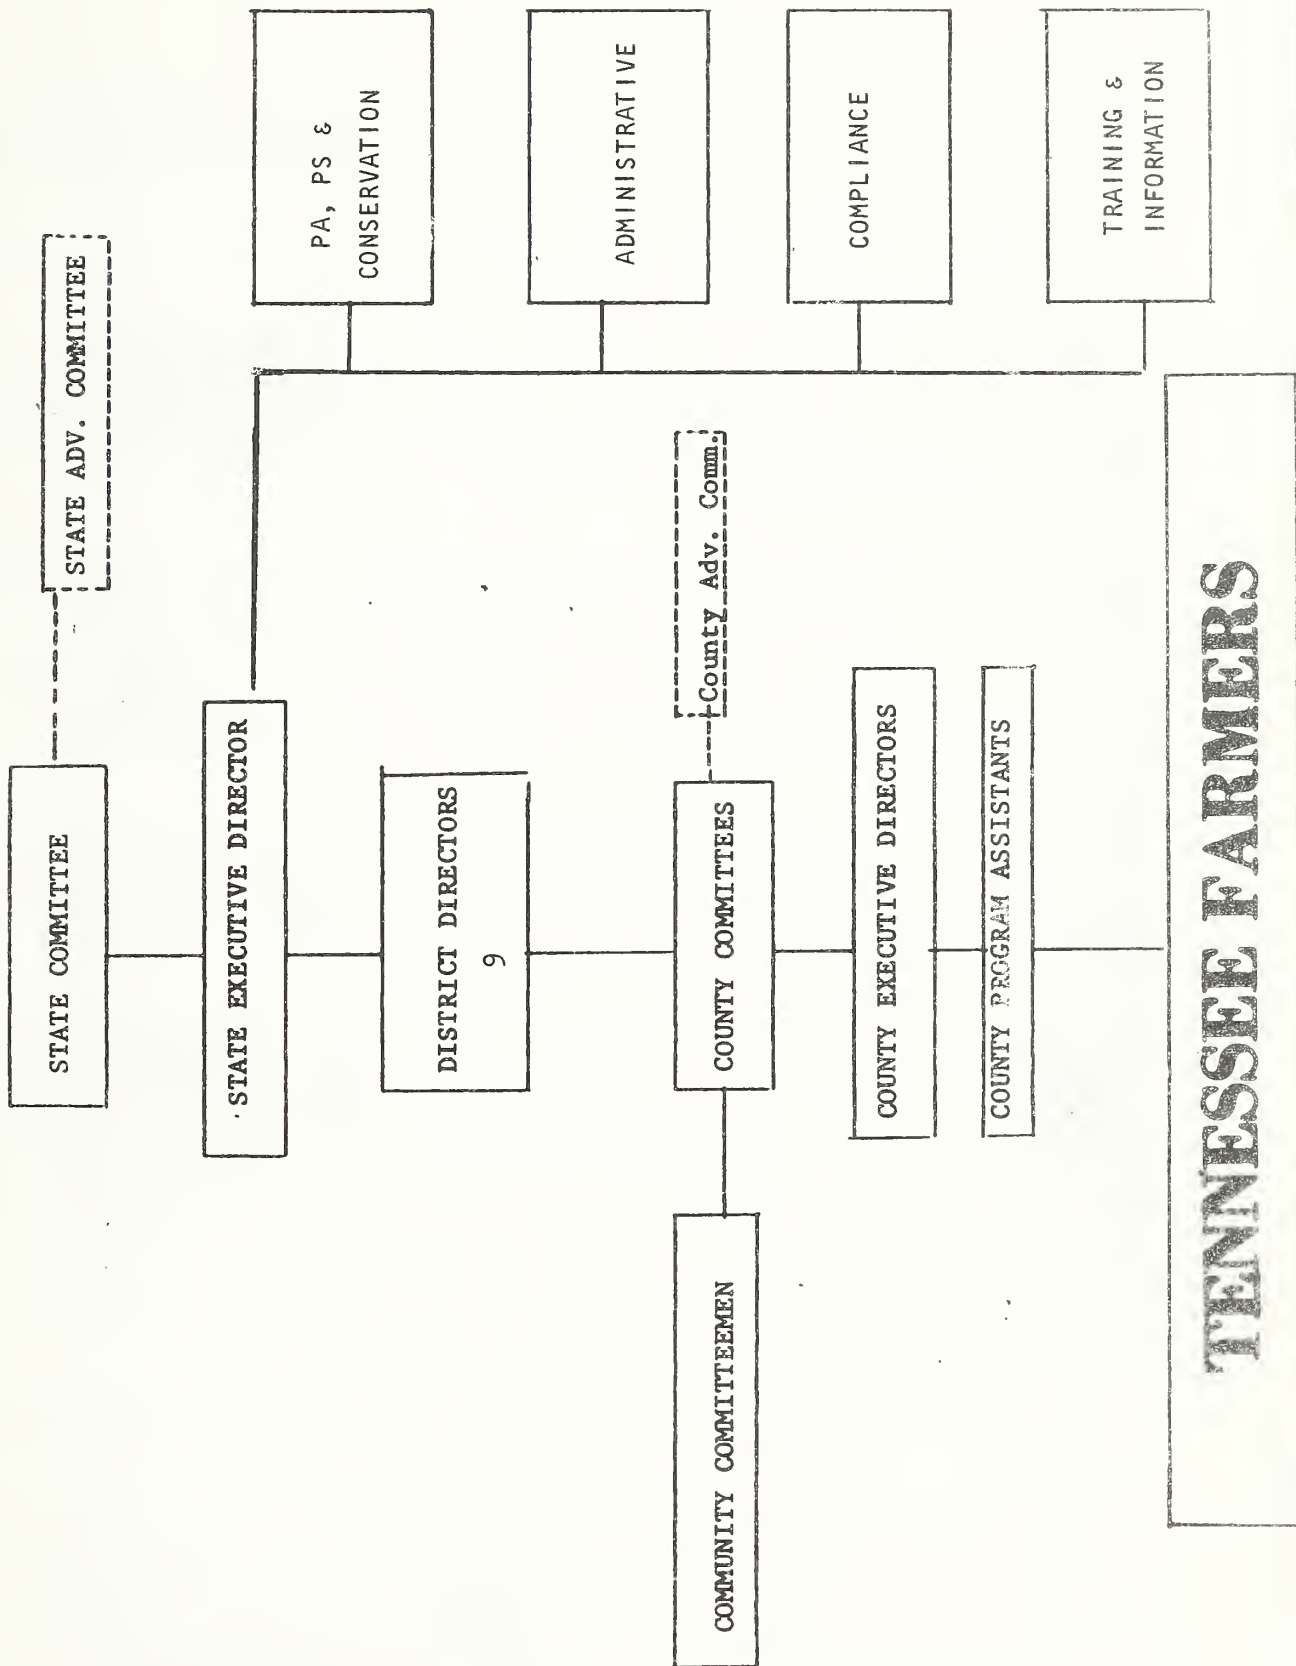

STATE EXECUTIVE DIRECTOR

W. M. CROSS

STATE OFFICE ORGANIZATIONAL CHART

ADMINISTRATIVE

The Administrative activities, supervised by the State Office for the 95 counties in Tennessee, deal primarily with management, personnel, training, budget, fiscal, office space, equipment and supplies.

Allocations of administrative funds are computed on the basis of a measured volume of work and basic costs for operating each county.

The State Office assists counties in obtaining adequate space with satisfactory arrangement, lighting, utilities, and parking. In many instances this space is in the same building with other agencies of the Department.

Guides on the type and quantity of equipment for proper operation of the office are furnished counties. Inventories are reviewed and approval given for permanent type equipment.

Distribution of all forms and envelopes is made through the State Office. Assistance is furnished to county offices for ordering office supplies through the General Services Administration.

Personnel man-day ceilings are established for each county. Counties are required to obtain approval for changes in the job classifications and for reinstatement of any position that is vacated through separation or resignation. A job description is established for each position.

Elections are held in the fall of each year. Three community committeemen and two alternates are elected in each ASCS community in the county. These community committeemen, in turn, elect one county committeeman each year for a three year term and two alternates for a one year term beginning on January 1.

CONSERVATION PROGRAMS

RURAL ENVIRONMENTAL ASSISTANCE PROGRAM

The Rural Environmental Assistance Program (REAP), successor to the ACP, is a voluntary cost-share program. It offers cost-sharing (generally on a 50-50 basis) with farmers to carry out needed conservation and environmental measures. Program emphasis is on long-term farm-related conservation and environmental problems in rural areas. Practices with substantial public benefits at the least possible public cost are given highest priorities. Higher cost-share levels are authorized for low-income farmers (up to 80 percent). Major considerations in authorizing cost-sharing are the resulting public benefits, such as pollution abatement, enduring soil and water conservation, recreation, wildlife and open space. Due to budgetary considerations the program was terminated for the 1973 program year. However, commitments already made prior to program termination, were honored and cost-shares were paid to farmers with existing conservation practice approvals.

EMERGENCY CONSERVATION MEASURES

Emergency Conservation Measures are authorized in designated disaster areas, where needed, to rehabilitate farmland damaged by natural disasters.

In 1973 special emergency assistance was approved in 43 counties to correct damage to farmland caused by excessive rainfall and flooding. Available emergency funds permitted farmers in these counties to repair or correct land damages caused by these natural disasters and/or to prevent further deterioration or erosion of productive farmlands. Without this emergency assistance the newly created conservation problems would have further impaired the land and adversely affected its productive capacity. The necessary repair or restoration work would have been so costly that the farmers would have been unable to carry out the needed conservation measures without emergency cost-sharing which amounted to about 80 percent of treatment costs.

APPALACHIAN LAND STABILIZATION AND CONSERVATION PROGRAM

The Appalachian Land Stabilization and Conservation Program is authorized only in certain designated counties in the Appalachian states. The program provides assistance for land stabilization, erosion and sediment control, reclamation and conservation treatment measures. This is accomplished through long-term cost-sharing contracts (3 to 10 years) with land-owners and operators in the designated areas. Federal cost-shares range up to 80 percent of treatment costs. Cost-sharing is limited generally to not more than \$50 per acre for a maximum of 50 acres per farm. Counties designated for this

program are located in areas having the greatest economic growth potentials. The currently designated program includes the Roaring River Watershed portion of Jackson, Overton, and Putnam Counties.

CROPLAND ADJUSTMENT PROGRAM

The Cropland Adjustment Program was designed to divert the use of cropland from the formerly unneeded production of feed grain and allotment crops on a long term basis to needed conserving uses. Agreements with eligible producers were offered in 1966 and 1967 for periods of from 5 to 10 years. The program supplemented the annual commodity acreage diversion programs and, through Greenspan, provided for more open space and other recreational opportunities for urban areas. Specific incentives were offered to farmers if they shared their land facilities with the public (public access). Emphasis was given to the development of hunting and fishing areas through conservation practices designed to foster wildlife. Some of the existing CAP agreements will remain in effect through 1976.

CROPLAND CONVERSION PROGRAM

The Cropland Conversion Program was offered on a pilot basis during the period 1963-67 for agreements up to 10 years. The program was designed to improve family farm income by helping farmers convert cropland, primarily used for production of surplus row crops and small grains, to long-range income producing uses, such as forests, grass, water storage, wildlife habitat, or recreational facilities. Some of the existing agreements will be effective through 1975 in one county.

FEED GRAIN PROGRAM - 1973

The Agricultural Act of 1970, approved November 30, 1970, initiated a cropland set-aside approach for the 1971-1973 feed grain crop years. The act designated the feed grains to be corn, grain sorghum, and barley, if designated by the Secretary of Agriculture. For 1973, barley was included in the program. The act established a limit on the amount of payments a person could receive annually under the program.

The program was voluntary, and producers with corn, grain sorghum, or barley base were eligible to participate in the program. By participating in the program, producers could:

- 1 Earn payments for setting aside acreage on the farm and devote this acreage, as well as the farm conserving base acreage, to approved conserving uses.
- 2 Devote the remaining cropland to any crops not subject to marketing quotas.
- 3 Qualify for loans and purchases on all feed grains produced on the farm.

For 1973, feed grain producers had two plans to designate set-aside acreage and become eligible for payments:

10 percent set-aside: If cropland equal to 10 percent of the feed grain base was set-aside the payment rate was 32 cents per bushel for corn, 30 cents per bushel for grain sorghum, and 26 cents per bushel for barley, times the farm yield on one-half the feed grain base.

0 percent set-aside: Producers who elected not to set-aside acreage, but did not increase their feed grain acreage above 1972 were eligible for a lower payment rate of 15 cents per bushel for corn, 14 cents per bushel for grain sorghum, and 12 cents per bushel for barley times the farm yield on one-half the feed grain base.

Regardless of the plan a producer decided to participate in, if the producer complied with program and conserving base requirements, the producer was eligible to receive payments on one-half his base acreage, regardless of whether he planted feed grains or not.

The objectives of the program were to:

- 1 Maintain farm income at a high level.
- 2 Encourage production of crops, particularly soybeans, that are in demand on domestic and foreign markets.

FEED GRAIN PROGRAM - 1973 (Continued)

- 3 Provide greater flexibility for producers in their individual farming operations, and
- 4 Help the United States maintain a competitive position in world markets.

The feed grain base acreage for individual farms remained substantially the same as for 1972, and is based on the average feed grain acreage grown on the farm during 1959-1960, as adjusted.

COTTON PROGRAM - 1973

The Agricultural Act of 1970, approved November 30, 1970 was applicable to the 1971-1973 upland cotton crop years. The 1970 Act initiated a cropland set-aside approach for producers participating in the program, and established a payment limitation a person could receive annually under the program.

The program was designed to give farmers more flexibility in planning farm operations, protecting income, and keeping production in line with anticipated needs.

Some of the principal provisions of the 1973 program were:

- 1 Marketing quotas and penalties were not in effect.
- 2 The national allotment was 10,000,000 acres.
- 3 For full allotment protection, a producer was required to have planted or considered planted at least 90 percent of his farm allotment.
- 4 There was no cropland set-aside requirement as a condition for program eligibility.
- 5 The county committee determined whether or not cotton acreage could be transferred by sale or lease across county lines.
- 6 Approved temporary transfers of cotton acreage could extend beyond 1973.
- 7 A producer on a farm with a cotton allotment of 10 acres or less to qualify for a small farm payment was required to live on the farm and earn more than 50 percent of his income from cotton produced on the farm.

To be eligible for payments, a producer was required to have a farm cotton allotment, and signup to participate in the program, and comply with the conserving lease requirements for the farm.

The farm cotton payment yield was based on the actual yield per harvested acre for the three years, 1970, 1971, and 1972, adjusted for abnormal yields caused by national disaster.

Producers who complied with all program requirements earned farm payments on a quantity of cotton determined by multiplying the acreage planted within the farm base acreage allotment by the payment yield established for the farm.

The release and reapportionment of cotton acreage were basically the same as in prior years.

PEANUTS - 1973

Peanuts are under acreage allotments and marketing quotas. Such quotas are established each year by the Secretary of Agriculture. They are effective only when at least two-thirds of the growers voting in a referendum favor such quotas. This is a means of controlling production and guaranteeing the farmer a favorable price for his peanuts through the Price Support Program. On December 6-10, 1971 growers voted in a referendum favoring quotas for the years 1972, 1973, and 1974.

RICE - 1973

Tennessee is one of the rice producing states designated as a "Producer State". The Agricultural Adjustment Act of 1938, as amended, provides for the designated states to apportion the State rice allotment among rice producers in the State.

Upon prior approval from the County ASC Committee a producer may allocate his producer rice allotment to a farm in another county that has the capabilities for rice production.

TOBACCO PROGRAM - 1973

Marketing quotas for burley tobacco under a poundage program were in effect. The Secretary proclaimed the quotas which growers voting in a referendum overwhelmingly approved for 1971, 1972, and 1973.

Acreage allotments were in effect for fire-cured and dark air-cured tobacco. Growers voted in a 1973 referendum favoring quotas for 1973, 1974 and 1975.

The quotas in pounds or acres mean controlling production and assuring the farmers of a reasonable price for the tobacco under a price support program. Growers who planted within their acreage allotments of fire-cured and dark air-cured and did not use DDT or TDE were eligible for price support on the entire crop. The burley growers with quotas who did not use DDT or TDE were eligible for price support up to 110% of their effective quotas. The undermarketings for 1973 will be added to the 1974 burley poundage quota. Marketings over 100% of effective quota will be charged to the 1974 poundage quota.

Lease and transfer programs were available where growers could transfer quotas in case of burley and acreage allotments in case of fire-cured and dark air-cured tobacco between farms within the same county.

WHEAT PROGRAM - 1973

The basic goals of the 1973 wheat program were to:

- 1 Protect and improve farmers' income,
- 2 Give producers more decision-making freedom on their farms,
- 3 Reduce stocks in order to keep our grain supplies in line with anticipated needs, and
- 4 Put greater reliance on the market-place as the principal source of farm income.

The program provided for:

- 1 A required acreage set-aside equal to 86 percent of the farm domestic allotment.
- 2 An option to set-aside additional acreage for payment above the required minimum.
- 3 No limit on planted wheat acreage unless a farmer elected to set aside additional acreage over the minimum required.
- 4 The substitution of soybeans and feed grains for wheat to preserve wheat allotment history.

The National wheat allotment was called a National Domestic Allotment. The domestic allotments were used to determine the amount of acres to be set aside on a farm and the total domestic marketing certificates a producer could receive under the wheat program. The 1973 national domestic wheat allotment was 18.7 million acres.

The set-aside requirement was an acreage of cropland equal to 86 percent of the farm's domestic wheat allotment. The producer had an option to voluntarily set aside an acreage up to 150 percent of his 1973 domestic wheat allotment in addition to the 86 percent qualifying minimum.

Producers who failed to plant at least 90 percent of their domestic allotment, or an authorized substitute crop, were subject to a reduction up to 20 percent of the farm domestic wheat allotment.

The program was voluntary. Producers who signed up, set aside the required number of acres, and the farm's conserving base acreage, became eligible for program payments, and were eligible for price support loans on the farm's entire wheat production.

There was no limit on the planting of wheat for harvest if the producer signed up to set-aside only the minimum required for participation in the program. If the producer voluntarily set-aside acreage above the minimum, the total wheat production was limited on that farm.

There was no cross compliance for wheat in 1973. A producer could sign up on one farm, but did not have to participate on any other farm which he operated.

1973 COMPLIANCE OPERATIONS

The Secretary of Agriculture is required by law to provide for determining acreages of feed grains, wheat, cotton, peanuts, tobacco and rice, when programs are in effect, and to make such other acreage and land use findings as are necessary to determine compliance with the applicable program provisions.

Compliance determinations are made by requiring the farm operator to report and certify the data for his farm. This method is known as COMPLIANCE BY FARMER CERTIFICATION.

COMPLIANCE BY FARMER CERTIFICATION is accomplished by requiring participating farmers to report the acreage of crops and land uses for various programs. It applies to farms participating in the Set-Aside Program on Wheat, Feed Grain or Cotton. Farmers producing crops subject to marketing quotas, such as peanuts, rice, DAC and DFC tobacco, are required to certify the acreages planted to any of these crops. The operator or farms participating in the REAP report their practices. The certification of compliance is required on farms participating in the Cropland Adjustment, Cropland Conversion and the Appalachian Land Stabilization Program.

A portion of the farms for which acreages are reported and certified are visited for administrative control purposes to check the accuracy and reasonableness of reported acreages.

MEASUREMENT SERVICE is available to farm operators upon request and at a reasonable cost. This service may be used to determine the amount of crop to be planted, or the amount of crop already planted, or to establish official acreages for cropland fields that have not been measured previously. The known acreages can be used to reduce cost of production of the crop and assures full program compliance.

AERIAL PHOTOGRAPHY. A part of the compliance operation is maintaining an up-to-date set of aerial photographs for each county in the state. The photographs are enlarged from an aerial negative to a desired scale. New photography is obtained for the entire state every five or six years. See map "Status of Aerial Photography Coverage" as of September, 1973, which shows the latest photography available.

The aerial photographs are to scale accuracy and are used by ASCS in determining acreages devoted to crops and compliance with various program provisions. It has been determined that this is the most efficient and economical means of determining a large number of acreage determinations.

The aerial photographs may be purchased and used by other Federal agencies, state, county and city highway planning groups, by private organizations and individuals who need scaled photographs of large areas in planning their operations. Any person interested in purchasing photographs can obtain information and necessary forms for ordering photographs at any ASCS office or from the State ASCS office.

PRICE SUPPORT PROGRAMS - 1973

Farmers in Tennessee received price support through loans and purchases on barley, corn, cotton, grain sorghum, soybeans, and wheat. Tobacco was supported through advances from producer associations. Wool is supported through an incentive program to increase production.

Cotton loan notes were prepared at the county ASCS offices and by approved cotton loan clerks located at banks, gins, and cotton companies. All loans were disbursed by the county offices; however, producers whose cotton notes were prepared by approved cotton loan clerks could obtain advances at the place where their notes were prepared. Loan advances from approved cotton cooperative marketing associations were available to members of the associations.

In conjunction with price support operations ASCS makes loans to farmers for purchase or construction of grain storage and drying facilities. Only commodities which the farmer produces in compliance with ASCS programs are considered in determining need and eligibility for the facility. The loan could cover as much as 85 percent of the cost of the facility, not including the cost of materials and labor for concrete work or electrical wiring. The maximum term of the loan is 5 years. Loans usually are repaid in 4 annual installments.

Wool is an essential and strategic commodity not produced in sufficient quantity in the United States. It is the policy of Congress to encourage an annual domestic production of about 300 million pounds of shorn wool. The Secretary is directed to establish an incentive price for shorn wool which will encourage larger production. To encourage producers to sell wool for the best price possible, the incentive payment to the individual is determined by applying the percentage payment rate to his net sales proceeds. Payments are also made for wool on lambs that are sold before their first shearing. The price of mohair is supported through a similar incentive program.

ASCS operates a program for indemnification of dairymen whose milk was removed from market because of contamination by pesticides that are registered and approved by USDA. Also, beekeepers are indemnified for loss of honeybees destroyed, through no fault of the beekeeper, by registered and approved pesticides.
